Ergo Support

The best way to sit healthy and work comfortable when using your microscope.

Specially made Ergo Support

The Ergo Support has been developed especially for microscope users. Resting your arms close to your body takes away the strain from your back, shoulders and neck. It is a perfect way to work ergonomically, relaxed and supported.

Having good support for your arms is pivotal when working with a microscope. The unique armrest system makes it possible to position the armrests around your torso within a second, without using knobs or handles. With the Ergo Support you sit comfortable and work healthy.

A **compact lumbar support** that can be easily positioned in your lumbar region

Rotating curved armrests with broad pads that support your arms from the elbow to the wrist and keep them close to your body

Score Ergo Shape seat with recessed edges to maintain an active sitting position

Easy adjustment of height, seat angle and back angle

Foot operated height adjustment (optional)

Strong aluminium base with large castors for **easy manoeuvrability**
